The perfect system for the ideal residential formula

Senior citizens are increasingly opting for service flats, which comes as no surprise. As it link comfort and privacy to the provision of care, it is an ideal residential formula.. Preferably, care should be provided with as much discretion as possible, which is why an intelligent communications system is the perfect solution.

For more than 60 years Televic Healthcare has been a well-established brand within the sector. Its long-term support across many generations of call systems is unique in the market.

THE COMMUNICATIONS SYSTEM FOR SERVICE FLATS

INTERAXIO, DEVELOPED FOR AND BY USERS

- Reliable and user friendly call system
- Increase of care staff efficiency through a two-way intercom
- In compliance with the highest European standards in terms of safety for nursing staff call systems
- Easy to integrate into existing IT infrastructure
- Sufficient flexibility to interface with external organisations (emergency services, residential care centres and so on)
- Tracing of calls and presence via simple software packages.

Simplicity and efficiency

With our ageing population, being able to live independently is becoming increasingly important. Service flats are the perfect solution. Residents must not be made to feel like they are in need of care and care provision should evolve in line with the needs of the residents.

INNOVATIVE TECHNOLOGY

- Control lighting, roller shutters or sun reflectors via a terminal.
- Connect motion sensors using home automation.
- Welfare alarm when there is no movement in a flat.
- Various adjustable parameters to suit each flat.

REACHABLE VIA RECOGNISED CARE CENTRES 24/7

- Telephonic link with carers or retirement homes in the vicinity via smartphones (Axio Mobility)
- Telephonic link via UMO switchboard (Verklizan link) with recognised alarm centres, which means that calls go to centres that are in charge of qualified carers 24/7.

SIMPLIFIED CALLS

- Calls are made via buttons placed strategically throughout the appartement.
- Wireless calls via necklace or wristband transmitters.
- After an alarm, a call can be made without the resident having to pick up.
- Carers can reassure residents remotely.

ADDITIONAL SERVICES

- When the doorbell at the main entrance is rung, an image is sent directly to the room terminal. The resident can open the door via the screen or speak to the person at the door.
- It is also possible to select music channels via the room terminals. The built-in speaker is powerful enough to fill the whole room with music.
- Tasks which have been carried out can be recorded on every room terminal via a care package on the cloud. In addition to care tasks, technical assistance can also be recorded, for instance.
- It is also possible to interface with external packages and the system can evolve in line with the resident's needs.

INTELLIGENT KEY SYSTEM

- On entry, the key is placed in the 'energy saver'.
- The intelligent key system switches electricity on and off automatically.
- Precaution significantly reduces the risk of fire due to forgetfulness.
- The key is also used to access the flat and is programmable.
- If it is lost, a new key can be made immediately.

A service flat deserves real service

COMFORT AND SIMPLICITY

An intelligent communications system such as Televic Healthcare's interAxio opens up a tremendous range of possibilities. The primary aim is to enhance the comfort of the residents. For us such enhancement entails controlling music centrally, recording various activities, interaction with visitors and so much more. All of this is done using a beautifully designed and technically ingenious room terminal that is fun and easy to use.

SAFETY AND CONFIDENCE

The mobility of the residents is key in these extremely accessible service flats. When installing a system such as interAxio it is accompanied by several **additional benefits**.

A modern key system allows for **energy conservation** and **security**. The safety of the residents is enhanced considerably through the installation of emergency buttons, but also through the use of telephone communication in the terminals. This system ensures that there is constant interaction with the with the outside world and with a specific care manager in particular.

“

Ever since the new Televic Healthcare system was installed, I have been much more at ease as the person responsible for the care. The system works perfectly. I always let the residents know that I am on my way. They think it's really great!

Carer.

“

'It didn't take us long to decide to install interAxio. During the first demonstration it was already clear that the system offered major benefits to our service flats.'

Service flats building manager.

“

My parents have been living in a service flat for just over a year now and with the installation of the interAxio system, I know that they are getting 100% of the care that they need. Should something happen, then I'll be one of the first to know.

Son of residents

interAxio is the result of a great many user studies and the impact of innovative ideas. PRO features as one of our most important innovative platforms in this.
